

INSTALLATION INSTRUCTIONS

Ashbee™ Pressure Balance Tub/Shower Valve Trim

**Cross Handle
Model D35101640**

**Lever Handle
Model D35101600**

**To be used with D3500600.191
Rough Valve for Pressure Balanced Bath/**

*Thank you for selecting DXV. To ensure that your installation proceeds smoothly,
please read these instructions carefully before you begin.*

RECOMMENDED TOOLS AND MATERIALS

Most of the procedures require the use of common tools and materials, which are available from hardware and plumbing supply stores. It is essential that the tools and materials be on hand before work is begun.

Tubing Cutter

Channel Locks

Teflon Tape

Adjustable Wrench

Flat Blade Screwdriver

Phillips Screwdriver

Plumbers' Putty or Caulking

ROUGHING-IN DIMENSIONS:

- For reference

SAVE FOR FUTURE USE

1 INSTALL DIVERTER

CAUTION Turn off hot and cold water supplies before beginning.

- After finished tiling the wall, remove PLASTER GUARD (1). Remove two screws that secure the DIVERTER LID (2) and remove Lid. Inspect the inside surface of diverter port. Diverter port must be free of any dirt. Clean if necessary.
- Install DIVERTER (3) with SCREWS (4) removed from DIVERTER LID (2).
- Operate DIVERTER (3). DIVERTER (3) should slide in and out smoothly.
- Push on DIVERTER COVER (5).

2 INSTALL TRIM

CAUTION Turn off hot and cold water supplies before beginning.

- Push CAP (1) onto VALVE CARTRIDGE (2). Secure CAP (1) to VALVE CARTRIDGE (2) with SCREW (3) for LEVER HANDLE only. (Spline in CAP (1) must fully engage spline on cartridge stem).
- Mount ESCUTCHEON HOLDER (16) with gasket and ESCUTCHEON (4) to valve body with SCREWS (5).
- Push the COVER (17) as shown over the CAP (1).
- Thread DIVERTER KNOB (6) onto diverter stem.

2a INSTALL HANDLE (ADJUST HOT LIMIT STOP PRIOR TO HANDLE INSTALLATION, SEE STEP 3)

- **FOR CROSS HANDLE:** Thread HANDLE BASE (7) onto threads of CAP (1) until seated against its internal stop. With VALVE in off position align CROSS HANDLE (8) as desired. Install CROSS HANDLE (8) onto VALVE STEM (9) and tighten HANDLE SCREW (10). Insert INDEX (11) into CROSS HANDLE (8).
- **LEVER HANDLES:** Thread HANDLE BASE (12) onto threads of CAP (1) until seated against its internal stop. Install FRICTION WASHER (15) onto base of LEVER HANDLE (13). Align LEVER HANDLE (13) and tighten set screw with HEX WRENCH (14) supplied with faucet to secure handle.

3 ADJUST HOT LIMIT STOP (MUST BE DONE PRIOR TO TRIM INSTALLATION)

By restricting **HANDLE** rotation and limiting the amount of hot water allowed to mix with the cold, the **HOT LIMIT SAFETY STOP (1)** reduces risk of accidental scalding. To set the maximum hot water temperature of your faucet, all you need to do is adjust the setting on the **HOT LIMIT SAFETY STOP (1)**.

- Turn **CARTRIDGE STEM (2)** to the OFF position (coldest setting) before making adjustment to **HOT LIMIT SAFETY STOP (1)**. Use a flat blade screwdriver to pry free the **HOT LIMIT SAFETY STOP (1)**. Pull forward and rotate counterclockwise one number to limit hot water temperature. Use **ARROW (3)** on **CARTRIDGE (4)** and **NUMBERS (5)** on **HOT LIMIT SAFETY STOP (1)** for indication.
