# Paradigm™ Selectronic® 702B Series Faucet

Commercial Sensor Faucet

# Paradigm™ Selectronic® Faucets:

#### **Base Models:**

Less Mixing: 702B.103, 105 & 115

Above-Deck Mixing (ADM): 702B.203, 205, & 215

SmarTherm + ADM: 702B.303, 305 & 315

Making life healthier, safer and more beautiful at home, at work, and throughout the world.

Sleek and streamlined, the Paradigm™ Selectronic® Integrated Faucet from American Standard takes a cue from modern design. It features the patented SmarTherm® Safety-Shut Off which is ASSE 1070 certified and automatically protects the user from scalding. The simple integrated design is engineered for easy installation and maintenance to save time and money. It eliminates the control box and provides for a clean, clutter-free under-deck space.

Paradigm™ Selectronic® 702B Series Faucet Commercial Sensor Faucet

This declaration is an environmental product declaration (EPD) in accordance with ISO 14025. EPDs rely on Life Cycle Assessment (LCA) to provide information on a number of environmental impacts of products over their life cycle. Exclusions: EPDs do not indicate that any environmental or social performance benchmarks are met, and there may be impacts that they do not encompass. LCAs do not typically address the site-specific environmental impacts of raw material extraction, nor are they meant to assess human health toxicity. EPDs can complement but cannot replace tools and certifications that are designed to address these impacts and/or set performance thresholds – e.g. Type 1 certifications, health assessments and declarations, environmental impact assessments, etc. Accuracy of Results: EPDs regularly rely on estimations of impacts, and the level of accuracy in estimation of effect differs for any particular product line and reported impact. Comparability: EPDs are not comparative assertions and are either not comparable or have limited comparability when they cover different life cycle stages, are based on different product category rules or are missing relevant environmental impacts. EPDs from different programs may not be comparable.

Paradigm™ Selectronic® 702B Series Faucet Commercial Sensor Faucet

### **Product Definition and Information**

### **Production Description**

Sleek and streamlined, the Paradigm™ Selectronic® Integrated Faucet from American Standard takes a cue from modern design. It features the patented SmarTherm® Safety-Shut Off which is ASSE 1070 certified and automatically protects the user from scalding. The simple integrated design is engineered for easy installation and maintenance to save time and money. It eliminates the control box and provides for a clean, clutter-free under-deck space.

Manufacturing Location: Monterrey, MX

#### **Application**

Flush Valve and Faucet products are used in a variety of bathroom and kitchen applications, including, but not limited to, hospitality, healthcare, education, government, military, office, and residential settings.

#### **Environmental Activities and Certification**

The LIXIL Group promotes conservation of water and raw materials and sustainable practices across the entire lifecycle of our products from inputs, procurement, through use and disposal. On September 17, 2017 LIXIL Group Corporation announced placement in the Dow Jones Sustainability Indices (DJSI) for sustainability performance. LIXIL Group was included in the DJSI Asia-Pacific Index as the highest scoring company in the Building Products Industry, and ranked third globally in this industry group.

#### **Techincal Data**

For the declared product, the following technical data in the delivery status must be provided with reference to the test standard:

#### **Technical Data**

Category	Value
Height	7.5"
Depth	7.5"

#### **Market Placement / Application Rules**

The standards that can be applied for the Paradigm Selectronic Faucets are:

- ANSI A117.1 (ADA Compliant)
- ASME A112.18.1
- ASSE 1070 (only for 702B.303, 702B.305, 702B.315)
- CSA B125.1
- NSF 372
- NSF 61

### **Properties of Declared Product as Delivered**

The product arrives to the site of installation packaged in a cardboard box with similar dimensions to the product size stated above. Installation instructions are available online, and additional installation materials may be required.

Paradigm™ Selectronic® 702B Series Faucet Commercial Sensor Faucet

# **Material Composition**

The composition of the Paradigm™ Selectronic® 702B Series Faucet is as follows:

Component	Percentage in mass (%)
Brass	35.06%
Zinc	53.43%
Stainless Steel	7.58%
Rubber	0.22%
Plastics	3.71%
Other	0.00%
Total	100.00%

### Manufacturing

The primary manufacturing processes in the product of flush valve and faucet products are processes such as smelting, casting, trimming, and buffng of metal parts. These parts, along with other pre-fabricated components, are assembled into the final flush valve and faucet products.

Manufacturing Location: Monterrey, MX

### **Environmental and Health During Manufacturing**

Lixil is committed to producing and distributing flush valve and faucet products with minimal environmental impact, where health and safety is the primary focus for all employees and associates.

- Environmental operations, GHG, energy, water, waste, VOC, surface treatment and H&S are being routinely monitored. Inspections, audits, and reviews are conducted periodically to ensure that applicable standards are met and environment management program effectiveness is evaluated.
- Code of Conduct covers human rights, labor practices and decent work. Management of Lixil is aware of their environmental roles and responsibilities, providing appropriate training, supporting accountability, and recognizing outstanding performance.
- Any waste metals during machining are separated and recycled. Process water is treated internally before being discharged to municipal wastewater treatment.

#### Installation

The product is installed using an electric drill, in additon to caulk, which is used to create a waterproof seal along the edges of the installed product. No noise reduction measures are typically required or undertaken during the installation of these products. The installation phase also considers the disposal of packaging materials.

Paradigm™ Selectronic® 702B Series Faucet Commercial Sensor Faucet

### **Packaging**

These products are primarily packaged with cardboard, paper, and plastic wrap. All of these materials are recyclable.

# **Use Conditions**

The use phase of flush valve and faucet products includes the operational water use over the lifetime of the products. Additionally, faucet products consider the operational energy use required to provide hot tap water. Both operational energy and water use are calculated using the methodology detailed in the product category rules.

### **Environmental and Health During Use**

There is no harmful emissive potential. No damage to health or impairment is expected under normal use corresponding to the intended use of the product.

#### **Reference Service Life**

The Reference Service Life is 10 years.

#### **Extraordinary Effects**

#### Fire

No danger to the environment is anticipated during exposure to fire.

#### Water

No substances are used which have a negative impact on ecological water quality on contact by the product with water.

#### **Mechanical Destruction**

No danger to the environment is anticipated during mechanical destruction.

#### **Re-use Phase**

These products are not typically reusable.

#### **Disposal**

While flush valves and faucet products are able to be recycled, this study adpots the conservative assumption of a 100% landfill scenario.

#### **Further Information**

LIXIL Water Technologies One Centennial Avenue Piscataway, NJ, 08854

### Life Cycle Assessment

#### **Functional Unit**

The declaration refers to the functional unit of 1 unit (or piece) of the Paradigm™ Selectronic® 702B Series Faucet.

Name	Value	Unit
Declared unit	1	Piece
Mass	1.78	kg
Conversion factor to 1 kg	0.56	-
Declared unit	2.0E-03	ton

Paradigm™ Selectronic® 702B Series Faucet
Commercial Sensor Faucet

### **System Boundary**

This is a cradle-to-gate with options Environmental Product Declaration. The following life cycle phases were considered:

Product Stage				truction ss Stage		Use Stage					Er	nd of Li	fe Stag	je*	Benefits and Loads Beyond the System Boundaries	
Raw material supply	Transport	Manufacturing	Transport from gate to the site	Construction/ installation process	Use	Maintenance	Repair	Replacement	Refurbishment	Operational energy use	Operational water use	Deconstruction /demolition	Transport	Waste processing	Disposal	Reuse- Recovery- Recycling potential
A1	A2	A3	A4	A5	B1	B2	В3	В4	B5	B6	В7	C1	C2	C3	C4	D
Х	Х	Х	Х	Х	Х	Х	Х	Х	Х	Х	Х	Х	Х	Х	Х	MND

Description of the System Boundary Stages Corresponding to the PCR (X = Included; MND = Module Not Declared)

### **Estimates and Assumptions**

#### **End of Life**

In the end of life phase, a 100% landfill scenario was assumed.

#### **Cut-off Criteria**

In the assessment, all available data from the production process are considered, i.e. all raw materials used, auxiliary materials (e.g. lubricants), thermal energy consumption and electric power consumption - including material and energy flows contributing less than 1% of mass or energy (if available). In case a specific flow contributing less than 1% in mass or energy is not available, worst case assumption proxies are selected to represent the respective environmental impacts. Impacts relating to the production of machines and facilities required during production are out of the scope of this assessment.

No known flows are deliberately exluded from this EPD.

#### **Background data**

For life cycle modeling of the considered products, the SimaPro 9.1.1 software is used. Primary data was collected from the Lixil owned facilities. Secondary data was used for upstream raw material production and downstream inventory flows. This secondary data was sourced from either the Ecoinvent 3.5 or USLCI databases.

#### **Data Quality**

The data sources used are complete and representative of North America in terms of the geographic and technological coverage and are a recent vintage (i.e. less than ten years old). The data used for primary data are based on direct information sources of the manufacturer. Secondary data sets were used for raw materials extraction and processing, end of life, transportation, and energy production flows. Wherever secondary data is used, the study adopts critically reviewed data for consistency, precision, and reproducibility to limit uncertainty.

#### **Period Under Review**

The period under review is 2018 Fiscal Year.

<sup>\*</sup>This includes provision of all materials, products and energy, packaging processing and its transport, as well as waste processing up to the end-of waste state or disposal of final residues.

Paradigm™ Selectronic® 702B Series Faucet Commercial Sensor Faucet

#### **Allocation**

Impacts associated with recycled materials were assigned to the previous product system using the cut-off method for end of life allocation. To determine the manufacturing impacts per product, total facility inputs were allocated on a unit basis. No credits from recycling or energy recovery are included.

#### Comparability

A comparison or an evaluation of EPD data is only possible if all data sets to be compared were created according to EN 15804 and the building context, respectively the product-specific characteristics of performance, are taken into account. Environmental delarations from different programs may not be comparable. Full conformance with the selected PCR allows EPD comparability only when all stages of a product's life cycle have been considered. However, variations and deviations are possible.

# LCA: Modeling Scenarios and Additional Technical Information

The following technical information is a basis for the declared modules or can be used for developing specific scenarios in the context of a building assessment if modules are not declared. Any information omitted from the following scenario tables was done so intentionally as it was unrelated and had no presentable values.

Transport to Building Site (A4)								
Name	Value	Unit						
Liters of fuel	38	l/100km						
Transport distance	1651	km						
Capacity utilization (including empty runs)	90	%						
Gross density of products transported	-	kg/m <sup>3</sup>						
Capacity utilization volume factor	0.11	-						

Installation into the Building (A5)							
Name	Value	Unit					
Auxiliary materials		kg					
Water consumption	-	m <sup>3</sup>					
Other resources	0.05	kg					
Electricity consumption	3.9E-04	kWh					
Other energy carriers	-	MJ					
Waster materials at construction site	2.50	kg					
Output substance (landfill)	2.00	kg					
Output substance (incineration)	0.50	kg					
Direct Emissions to ambient air, soil, and water	0.21*	kg CO <sub>2</sub>					

 $<sup>^{\</sup>star}$  CO  $_{2}$  emissions to air from disposal of packaging

Maintenance (B2)							
Name	Value	Unit					
Information on maintenance	-	-					
Maintenance cycle	-	Number / RSL					
Water consumption (from tap, to sewer)	-	m <sup>3</sup>					
Auxiliary materials (cleaing agent)	-	kg					
Other resources	-	kg					
Electricity consumption	-	kWh					
Other energy carriers	-	MJ					
Material loss	-	kg					

Replacement (B4) / Refurbishment (B5)							
Name	Value	Unit					
Replacement cycle	-	Number / RSL					
Replacement cycle	6.5	Number / ESL					

Operational Enery Use (B6) and Water Use (B7)							
Name	Value	Unit					
Water consumption (from tap, to sewer)	97.5	m <sup>3</sup>					
Electricity consumption	2.4E+03	kWh					
Other energy carriers	-	MJ					
Equipment output	-	kW					
Direct Emissions to ambient air, soil, and water	-	kg					
Further assumptions	*	-					

<sup>\* 10</sup> years of use, 365 days per year, 282 seconds per day, 0.025 gallons per second

End of Life (C1 - C4)								
Name	Value	Unit						
Collected separately	-	kg						
Collected as mixed construction waste	1.78	kg						
Reuse	-	kg						
Recycling	-	kg						
Energy recovery	-	kg						
Landfilling	1.78	kg

### Interpretation

Generally, the operational energy use (B6) or operational water use (B7) phase drives the environmental impacts across the full life cycle of the product. The one exception to this trend is in the eutrophication category, where production (A1-A3) is the dominant life cycle stage.

Paradigm™ Selectronic® 702B Series Faucet Commercial Sensor Faucet
